INSTRUCTION FOR USE
ANTISEPTIC LIQUID No. 2

INDICATIONS
The scope of use is dentistry. Professional use in the healthcare facility. ANTICEPTIC LIQUID No.2 is used for:
- treatment of infected root canals in pulpitis and periodontitis;
- medication of the prepared tooth cavity before filling;
- prophylactic washing of mucous tunic of mouth in gingivitis and the primary stage of periodontitis;
- antiseptic washing of periodontal pockets.

SPECIAL PRECAUTIONS
Drug idiosyncrasy. Use with great care for allergic patients. Don't misuse.

POSSIBLE ADVERSE EFFECTS
If the conditions of storing, transporting and following the instructions are satisfied, there are no adverse effects.

COMPOSITION AND CLINICAL PHARMACOLOGY
ANTICEPTIC LIQUID No.2 contains stabilized sodium hypochlorite of various strength (3.0%; 5.2%).
The materials are produced for using in aggressive biological matrix with the temperature range between 32°C and 42°C (in the mouth cavity at the temperature (37±1) °C and humidity 60-90 %).

METHODS OF ADMINISTRATION
The liquid are used with the help of the dropping pipette, root needle, narrow cotton swab or tamponing.
The effective cleaning of the root canal system is provided by ANTICEPTIC LIQUID No.2 containing sodium hypochlorite (3.0%) with the help of endodontic needle with the side hole (or bulb syringe) for injecting solutions into the deep parts of the root canal. It is necessary to use the salivary aspirator at the point of the treated tooth because the antiseptic solution has a high alkaline reaction and can burn the tunica mucosa of the mouth. For finishing irrigation 15-20 ml of sodium hypochlorite is exposed in the canal during 5-7 minutes.
The concentrated solution of sodium hypochlorite (5.2 %) should be diluted with the distilled water for the necessary concentration. The concentrated solutions without being diluted can decompose the live pulp.
Close the materials tightly after use.

PRESENTATION FORM
Antiseptic liquid No.2 (bottle) 100 ml or 300 ml
Instruction for use 1 piece

STORAGE
Store at a temperature of 5°C to 25°C.
Do not use after expiry date.
Shelf life: 3 years from date of manufacture.
